

Task Sheet for Tech Lecturer Position

This task sheet is designed to evaluate the technical expertise and teaching capability of Tech Lecturers in Python and Frontend development through practical, real-world tasks.

These are the basic instructions provided as guidance. You are encouraged to add your own concepts, features and ideas to further enhance and improve the application.

PART A: PYTHON

Task 1: Core Python & Logic

Create a Python script that:

- Accepts a list of student marks
- Calculates average, highest, and lowest marks
- Displays pass/fail count (pass ≥ 50)
- Handles invalid inputs

Task 2: Practical Python API

Build a simple Student Management API using Flask or FastAPI.

Required Features:

- Add a student (name, email, course)
- List all students
- Delete a student
- In-memory storage (no database required)
- Add Validation

PART B: FRONTEND

Task 3: UI Layout & Responsiveness

Create the required responsive pages to complete the full application flow.

Create a responsive student registration form with:

- Name
- Email
- Course
- Submit button

Technologies:

- HTML, CSS, JavaScript or React

Task 4: Frontend Logic

Display submitted students in a list or table:

- Add students dynamically
- Delete students
- API integration

PART C: Explanation Video

Record a 5–7 minute screen-recorded video explaining:

- Python concepts used
- Frontend concepts used

PART D: Viva – Will Be Scheduled

- You will be asked to explain how they would teach selected concepts to beginners.

SUBMISSION REQUIREMENTS

- GitHub Repository Link

The complete source code must be uploaded to a public GitHub repository.

- README.md File

The repository must include a README file with Project overview, Technologies used and step-by-step setup instructions to run the project locally

- Video Explanation Link (5-7 minutes)

A short screen-recorded video explaining Key Python logics used, Frontend structure and User interaction (YouTube/ Google Drive link accepted)

- Live Hosted Application Link (*Preferred*)

Hosting is *not mandatory* but will be considered a strong advantage.

DEADLINE

All submission requirements must be completed and submitted on or before

12th February at 05:00 PM.

Please send **an email to admin@uki.life** including the following:

- GitHub repository link
- Hosted application link (if available)
- Video explanation link

Once the submissions are reviewed by the evaluation team, shortlisted candidates will be contacted to schedule an **in-person explanation session**.

Late or incomplete submissions will not be considered.
